[4118] - 202

3. Attempt any two of the following : (2x5=10)

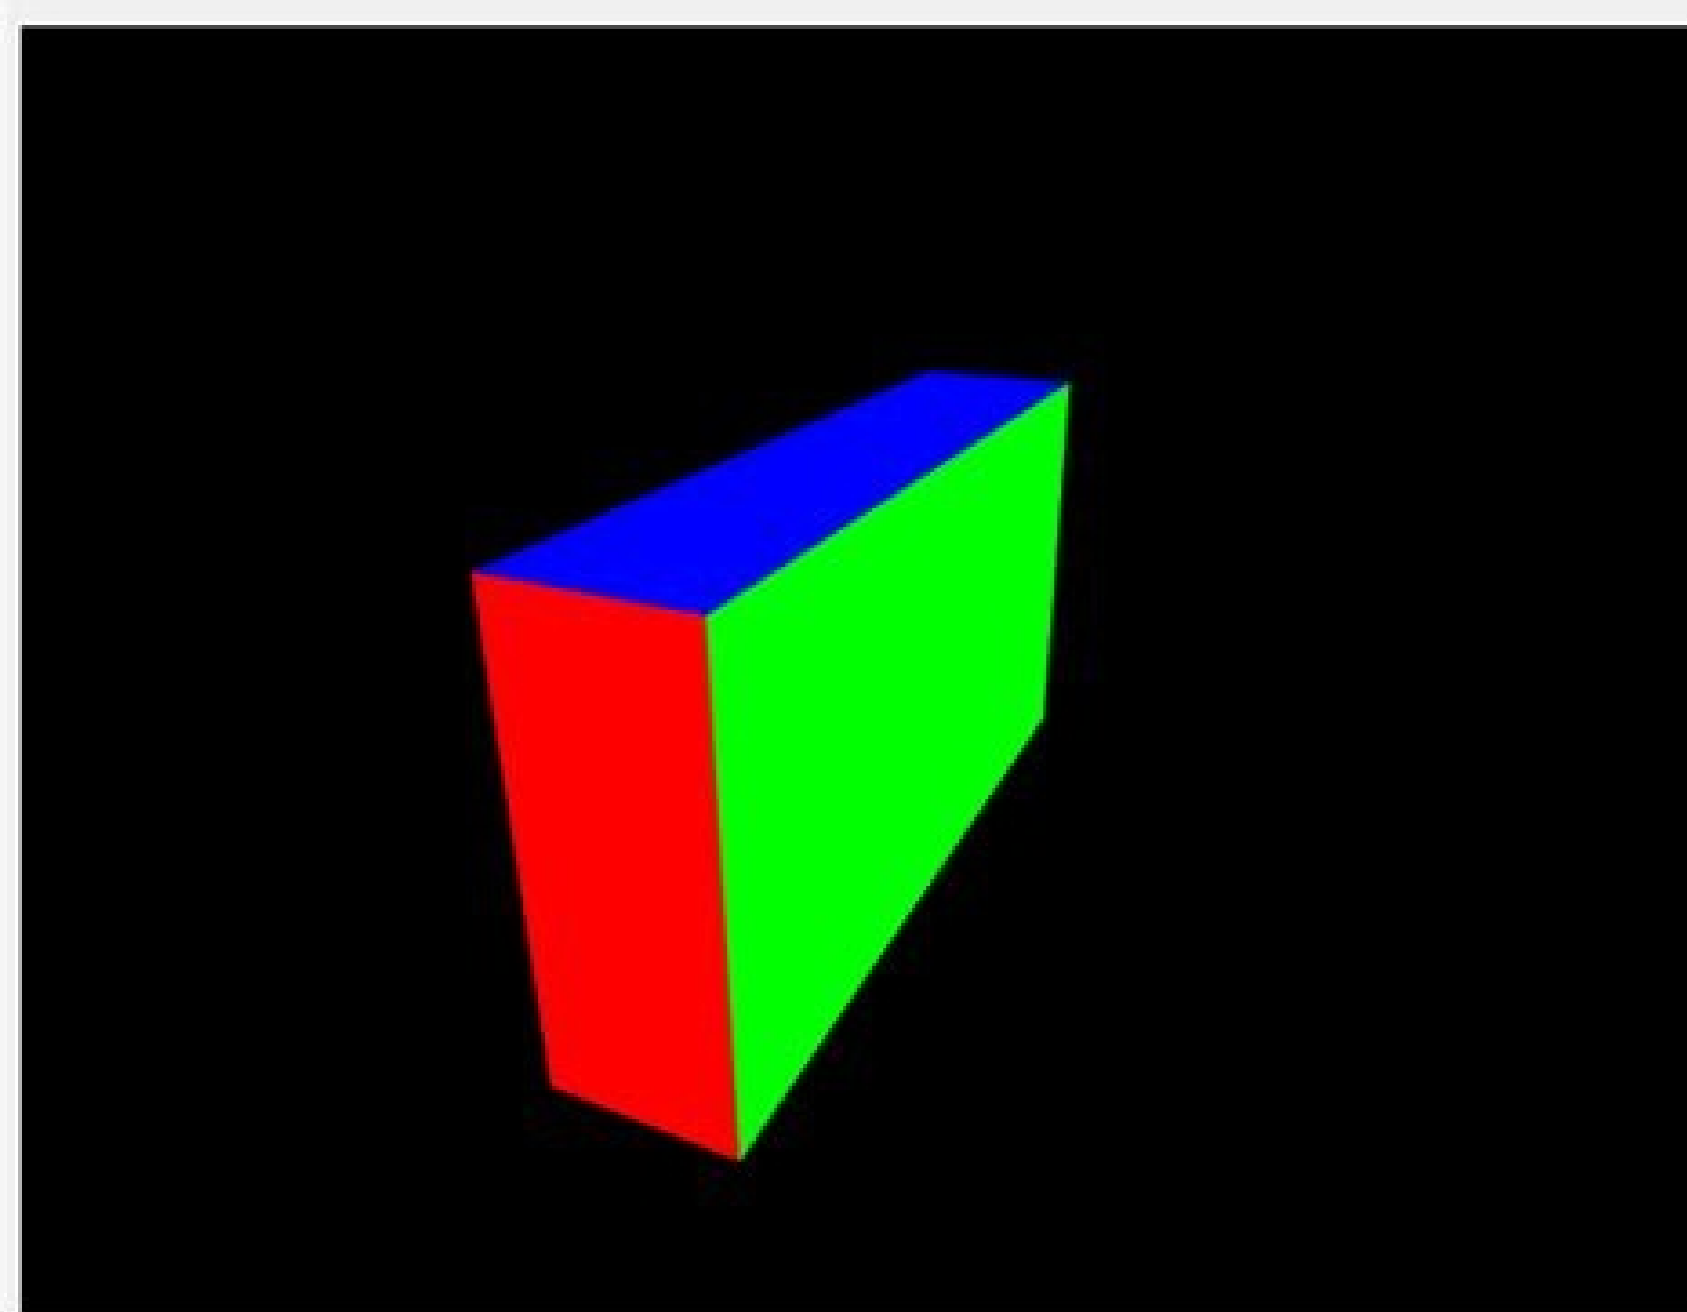

- a) Explain framework activities for personal software process [PSP].
- b) Explain any five principles for planning practices.
- c) Explain McCall's quality factors of software.

4. Attempt the following : (2x5=10)

- a) Explain Negotiating requirement.
- OR
- a) Explain the factors that should be considered while constructing system model.
- b) Draw context level DFD, first level DFD and E-R diagram for "College Admission System".

Visit www.shaalaa.com for more question papers

**Security, access, and encryption**

These settings control whether your cluster will be created in an existing VPC to allow for simpler integration with other AWS Services, and the security groups which define access rules to your cluster.

**Virtual private cloud:** vpc-0d9b2ab075374e49

**Cluster subnet group:** cjs-5332082-0bca48fcb950e25f-redshiftclustersubnetgroup-s1w8ena1obib

**Publicly accessible:** Yes

**Elastic IP:** Not used

**VPC security groups:** Redshift Security Group (sg-07af0374192a69e63)

**Enhanced VPC Routing:** No

**Encrypt database:** No

**CloudWatch alarms**

CloudWatch alarms are used to notify if metrics for your cluster are within a certain threshold. All recipients under the SNS topic specified for your alarm will receive notifications once an alarm is triggered.

Basic alarms will not be created for this cluster.

OWASP ZED Attack Proxy Project: The Zed Owasp Attack Proxy (ZAP) is one of the most popular free security tools in the world and is actively maintained by hundreds of international volunteers \* Gregory Modeling Headship Headsheet by Owasp e by OWASP Modeling of threats in the company, Part 1: Understanding the basic concepts of Shlyana Simonova Modeling of threats: What, why, and how? A, Adam Shostack threatening modeling by Adam Englander Devsecops mannequins, threat modeling and you: Start using Stride AMARO AMARO AMARO ALMEDIDA MODEL OF THREAT: How, when and what tools for the Debarghya Threat Threat Data Sheet by Synopsys Model Modeling Safety Innovation Blog: 6 errors that are probably doing by Jeff Betters how to create a threat model for infrastructure safety in the cloud. Please, you should worry about the Modelleradth threat Benefits of the amenity model of amenity amenity model: a summary of the men all available Whowpaper by Nataliya Shevchenko, Timothy A. Microsoft Threat Modeling Tool: The Microsoft Modeling 2016 tool is a tool that helps find threats in the Design Phase of the Projects Software. Vagrant: Vagrant is a tool to build and manage virtual machine environments in a single workflow tumble; Tutere is a powerful SaltStack SaltStack business qualification configuration management tool is an open code software based on Python for IT automation based on events, execution of remote tasks and configuration administration. Archaius: Archaius is a configuration management library with a focus on the dynamic properties obtained from multiple stores RAINDANCE: Project aimed at doing attack maps Part of the development of software by reducing the time it takes to complete them in threat. threat. More in the development process. You can use it with gitlab.com or with your own gitlab instance. Checkov e e e e - "Checkov is a tool for analysis of static code for infrastructure as code. Croper e e e e - "Library Design to be used as part of a Lambda function for "Apart "A cloud template and verify it for compliance with security. It does not matter, you are an agil store, the depoops store or a native cloud store, continuous integration, continuous delivery and implementation are the cornerstones of modern software development. Dynamic analysis The safety test is a technique to analyze the request for execution of security vulnerabilities. Since an application is being executed and examined dynamically its dynamic analysis. It is also a great tool for experienced pentesters to be used for manual security tests. Tutorials and blogs that explain the modeling of threats. What is the modeling of security threats? A, Lawrence C. PageD BURP Suite e e e e - "BURP Suite is an integrated platform to perform Web application security tests. Discharging! Most of the organizations realize that Pentest is not a Holy Grail and It is investing resources to secure the principle of using PROVISTIC Practices, it likes CI / CD systems, infrastructure as a code, security as a code and compliance as a code. Explore the infrastructure of the cloud Provisioned using Terraform and detects security security and compliance errors. Terrascan: a collection of safety tests and better practices for the analysis of static code of Terraform templates using Terraform. Validate. Now with Terraform V0.12 + support. You may want to review the courses of your devsecops to get more information with the of step by step easier. Irius payment tools: IRIUSRISK is a threat modeling tool with an adaptive questionnaire driven by an expert system that guides the user through direct questions about technical architecture, planned features and security context of The application. Namely, git (version (version (version System) CI / CD (Integration and continuous delivery) Artifact management infrastructure such as code (configuration administration tools) cloud platforms (AWS or GCP or AZURE) Sensation overwhelmed? The comprehensive collection of devsecops of learning resources such as books, tutorials, infographies, tools and much more. Let's say. Wapiti: Wapiti allows you to audit the security of your websites or web applications. You just have to understand the basis for working with them. The objective of the project is to create a framework to help you ensure your web applications by finding and exploiting all the vulnerabilities of web application. In the same way, we will do enough to work. CFN NAG: The CFN-NAG tool looks for patterns in CloudFormation templates that may indicate insecure infrastructure. It is designed to facilitate testing and communication between groups and create processable tests that can be engaged in their implementation and test processes. Vega can help you find and validate SQL injection, the script on the site (XSS), disseminated confidential information and other vulnerabilities inadvertently. TFSEC: TFSEC uses a static analysis of its Terraform templates to detect possible security problems. Detecification: Automated safety and active monitoring for all equipment. Your Web Applications for 1500+ Vulnerabilities NetSparker e e e e - "NetSparker is a scalable and multi-user web application security solution with built-in workflow and ideal reporting tools for safety equipment. SD items: Automate threat modeling with The SD Fornetii elements. ... Securicad Vanguard is an attack simulation and an automated SaaS service of threat modeling that allows you to automatically simulate the attacks on a virtual model of your AWS environment. Tite by Asaf Yigal Chef vs A detailed comparison of the management tools of the SPEC India is close to the administration of the configuration: chef, ansixable and kubernetes by Kublr Team Configuration Management 101: Write writing Manifestos by Erika Heidi Tuppet Tutorial for beginners: Resources, classes, Manifesto. Modules by Guru99 A beginner guide of salt by Linode starting with the Salt Stack: The other configuration administration system built with Python by Ben Hosmer use salt for the Basic Configuration Bejoy Abraham Mathews An introduction to the terminology and concepts of SALTSACY by Justin Olingwood Configuration Management in GCloud by Google Configuration Holics on Facebook of Chunqiang Tang, Thawan Kooburat, Pradeep Venkathalam, Akshay Chander, Zhe Wen , Aravind Narayanan, Patrick Dowell and Robert Karl anxious: anxious is a chef of the configuration tool, the implementation and the implementation tool of the implementation tool and open code orchestration. The chef

is an automation tool that provides a way to define infrastructure as a code. Vega is a free web security and open code scanner and a web security testing platform to test the security of web applications. W3af: W3af is an audit attack and attack of web applications. TERRAFORM-AWS-SECURE-BASELINE: A TERRAFORM module to configure your AWS account with the reasonably secure-secure configuration baseline. It can help you automatically find security vulnerabilities in your web applications while you are developing and try your applications. Before embarking on our Devsecops trip, we, as a security professional, should be equipped with some critical tools. Nikto: Nikto is an open code web server (GPL) that performs complete tests against web servers for different elements, including more than 6700 potentially hazardous files / programs, checks for obsolete versions of more than 1250 servers, and problems of the version over 270 servers. The dynamic analysis does not need someone to be very knowledgeable in the complexities of a programming language. Owasp: threat-dragon-github, this project is a fork of the original Owasp Dragon web application of Mike Goodwin with Gitlab Gitlab Instead of Github. Speed is a competitive advantage and to achieve speed, agility and performance, organizations are creating infrastructure as their software / code instead of naked metal hardware servers. Configuration Management in DEVOPS by BMC Blog Top 10 Configuration Management Tools You must know about UpGuard Modern Configuration Management: Settings as a code by the administration of the Chef Settings 101: Write Playbooks Ansible by Erika Heidi Configuration Management and continuous deployment by Anilkumar Patel using ansible for the configuration ERIC Gestión Goebelbecker Management and Settings Management - the Way DevOps by Isaac Ndung 'U a Newbie guide for configuration management tools and how to start Oer Velich Automation of the administration of the configuration of the DEVOPS test environments by CAPGEMINI A Beginner Guà A Chef Automation by LINODE Automation, Automission and Configuration (Chef) by Sudhi All about a configuration administration tool called Chef by Mitesh Soni Configuration Management 101: Write Chef recipes by Erika Heidi Chef vs. Its various tools work to perfection for supports the entire testing process, from initial assignment and analysis. From the attack surface of an application, through finding and exploiting safety vulnerabilities. Most know how to drive an automobile without understanding the underlying concepts, such as the internal combustion engine, thermodynamics. Chick, Paige OÀ ç à, Rjordan, Thomas Patrick Scanlon, PhD, & Carol Woody, PhD Modeling Tooling Kità ç by Piednetworks How to start with threat modeling, before being hacked by hackermoon hall modeling tutorial à, by geeks for Geeks how to analyze the security of your request with modeling By Gorran Aviani T-threaten Modeling by SafeSode the power of a custom threat model, looking at Glass 7 simple steps to build a scalable threat modeling process in threat. Where is my my Model? "The Abehishék Datta tools, which help model threats, model free tools, Owasp Dragon", a line threat that models a web application, including system diagramming and a motor of rules to automatically generate threats / mitigations . It is not necessary that it be an expert in the previous tools. It is written in Java, GUI, and runs on Linux, OS X and Windows. It is available as a hosted and self-hosted solution and can be fully integrated into any development or test environment. Miller, Peter H. Modeling threats helps individuals and organizations to quantify safety efforts. Hand-on Labs HPC Configuration Management Using Puppet 5 by Cwmoller Scenerio Ansible by Katacoda Ansible from Zero to Best Practices by Will Thames Thames Saltstack Scenerio by Katacoda Puppet Learning-VM by tutere Now that basic concepts can explore meat of DevSecops resources. Modelate of threats and security review Static analysis (SAST) Dynamic analysis (dast) Safety as Code Compliance as the feeling of code. Do you feel overwhelmed? Gauntlt: Gauntlt provides hooks to a variety of security tools and places them within reach of security equipment, dev and PAHO to collaborate to build robust software. Use the following resources to change the remaining security. Recent advances in virtualization and cloud compaction allow us to perform infrastructure as a code. Most configurations are based on the foundations of CIS Amazon Web Services v1.2.0. In contact, or regain now! If you want to attack or defend such a system, you must understand the basis of it. that.
