# Lon capa answers calculus

Two forces  $F_1$  and  $F_2$  act on an object at a point  $P$  in the indicated directions. The magnitude of  $F_1$  is 18 lb and the magnitude of  $F_2$  is 16 lb. If  $\theta_1 = 35^\circ$  and  $\theta_2 = 30^\circ$ , find the resultant acting force on the object as well as its magnitude and its direction.

Resultant force =  $( 7.817 , 14.324 )$ .

Magnitude of resultant force = 16.318 lb.

Direction of resultant force = 118.6 degrees from a horizontal ray extending to the right of P.

Submit Answer **Incorrect.** Tries 2/8 Previous Tries

However, most responses do not need to be simplified or calculated at decimal values. This should be done by the teachers of the course or recitation instructors in consultation with the teachers. It is expected that all reciting instructors are present and available to help students with the use of the LON-layer system and with mathematical questions. To see the material included in this course, go to navigate content. How is it? Would you recommend going to the Mathematical Assistance Center? Anything else? Thank you. and the mathematics. Enter the student Pitt user name and select "Create / modify user". From the toolbar, go to Main Menten. Using the drop-down menu, choose JSMath and Save. FINAL DEGREES: The best results are offered in "See the progress graph of the course evaluation" with the "Full Name" selection, "currently has access", "Excel", "Summary of scores". To temporarily hide the material of the folders, check the opening date of the problem. The student will get a specified number of attempts to resolve each problem correctly. Once a student is enrolled in a different section, any previous previous work will not continue along with the section change. Thank you for your participation! Hello, I have been postponing the mathematics until the last minute and I am finally taking full time during my last part-time semester. However, there may be occasions in the laboratory in which a student has added too recently the course that will have to use this option. You can also consult an individual student by choosing "Select a student" and then choosing that individual from the given list. To change the predetermined number of attempts, check the maximum number of attempts. The problems will be resolved using traditional tools, such as pencil / paper, calculators or other computer programs. Students can work on their lon-layer Lon-layer From any computer with Internet access, the LON-CAPA system will automatically rate each student's work and keep records of grades. To check the progress of the class during the course, instead of having to download an Excel worksheet, you can have the progress displayed on your screen by changing the format from Excel to HTML, without links. The following <sup>3</sup> is a basic guide to using LON-CAPA. There is a pdfAc syntax that specifies the standard input syntax. Add / drop a single student or instructor Lists are updated overnight throughout the Add / DOW period. When students "fall", they no longer have access to the previously <sup>3</sup> section. Setting up <sup>3</sup> math sample One of the most important things for your students to be initially confident is to make sure they are using the correct math screen <sup>3</sup>. To change the parameters for an individual problem within a folder, choose Resource Level within the Select torque level and select all parts in Select Parts to View. Instructor responsibilities Setting <sup>3</sup> due dates Due dates must be set for each LON-LAYER <sup>3</sup>. Calculus 1 and the students of Calculation 2 will meet once a week in the calculus laboratory to work on these exercises individually. Students and instructors can access LON-CAPA from any computer with Internet access through the URL: This is the access server for the Pitt LON-CAPA domain. Instructors are not expected to solve problems for students, but they must answer questions and give suggestions as needed. Server <sup>3</sup> Coordinating a course with LON-LAYER Your course is set up for you in folders of calculus problems that the system will qualify in the <sup>3</sup> of students and offer a spreadsheet of scores in various formats. If the default configuration <sup>3</sup> not saved as JSMATH or MATHJAX, the page is very difficult to read and sometimes makes no sense to matter. Only this student's settings will be changed.
