Final Fantasy XIV is one of the most popular online multiplayer role-playing games. Many gamers around the world play it on their Windows PC. However, as the number of users increased, the PC version of this game began to show frequent bugs and crashes. From "DirectX Error" to "FFXIV Unexpected Error", you can get these messages at any point in the game, which will eventually force you to close the game. Fortunately, there are some effective solutions that can help you. fix these errors and restart the game. We have provided a list of solutions here to tell you how to solve the problem. So, if you are getting error messages like "FFXIV encountered an unexpected error", just scroll down and learn how to fix it. Here's what causes the Final Fantasy XIV unexpected error We've investigated various platforms in the gaming community to determine the exact cause of the FFXIV unexpected error message. Most users have found that this error often occurs when using DirectX11 in fullscreen games. This is because DirectX11 is not compatible with some video cards and certain settings. However, not only DirectX11, but also other reasons, such as outdated drivers or the use of SLI technology, break the game halfway. We have provided all possible solutions to resolve the issue and help you restart your game. Let's see. How to fix an unexpected error in Final Fantasy XIV? We have already mentioned the possible causes of such error messages. It's your turn to determine what exactly is going on with your computer and make the right decision. Let's start! Method 1: Run FFXIV in windowed mode, then switch to screen mode. Many players report that the game freezes on startup. The best solution to this problem is to change the display settings in the game. But that's not possible, so here's a better alternative. Yes, just edit the config file to run in windowed mode and use some keyboard shortcuts to switch to full screen mode later. I wonder how? Follow the steps below. RELATED: How to Fix Discord Audio Mute Error in 2021? Step 1: First, open File Explorer and find Documents. Step 2: Now click on "Downloads" and go to the folder called FINAL FANTASY XIV and open it. Step 3: Then find another file here called "FFXIV.cfg" and choose to open it using Notepad. Step 4: With the file open in Notepad, press Ctrl+F to open the Find tool. Enter the blank space in "ScreenMode" and click "Find Next". Step 6: Here you will be able to change the ScreenMode value, change it from "0" to "2". Step 7: Now press Ctrl+S at the same time to save the changes and finally exit Notepad. Note. After saving the changes, the game will open in a borderless window/window. You can return to full screen at any time by pressing Alt+Enter at the same time. When you're done, try restarting the game. The FFXIV "An unexpected error occurred" message should no longer appear. If the problem persists, follow the next solution. Method 2: Update your video card drivers If Method 1 doesn't solve the problem, check for outdated drivers. Some players have resolved this FFXIV DirectX11 error by simply updating their drivers. However, on the other hand, some users have noticed that the error message still appears even after updating the drivers - if this is the case for you, don't worry, we've got you covered! Follow the steps below and you will find a solution either way. Step 1. First, press the Windows logo key + R key to open the Run dialog, type "devmgmt.msc" and click OK. Step 2. Then go to the Display Adapters section and click the arrow next to it (on the left). Step 3. Then right-click on the graphics card in the drop-down menu. and select Update Driver. RELATED: How to Fix Error 511 CPU Fan Not Detected at Startup Note:Start by updating the driver, go to the graphics card manufacturer's website and download the latest graphics card driver. Step 4. Now when you open a new window, select Browse my computer for driver software. Step 5. Select file from save location. saved the updated version of the graphics card driver. Wait for the process to complete. Note. If your drivers are already up to date, follow steps 1 and 2 and then select the "Remove device" option. This will ensure that you remove incompatible drivers and install the ones that are compatible with your card, processor architecture, and operating system. Step 4. When you click "Remove Device", a pop-up window may appear asking for confirmation. Click OK. Step 5. You can now check your graphics card manufacturer's website for compatible drivers. Step 6. Once you find it, download the executable file, and install it on your computer. Note. Your computer may restart multiple times during driver installation. Don't worry, just try restarting the game when your computer is ready. If you still get the error message, follow the next solution. Method 3: Disable SLI Are you using SLI to run multiple graphics cards in the same configuration? Are you all about performance? Are you playing the game with everything maxed out? If so, then it's time to disable SLI. Yes, as useful as it is for players, some games work against the same. So if you are using SLI technology and you get an unexpected error in FFXIV while playing the game, follow these steps to prevent it from happening again. Step 1. First, right-click an empty spot on your desktop and select "NVIDIA Control Panel" from the context menu. Step 2: After opening the NVIDIA Control Panel window, locate and click on the 3D settings menu on the left navigation bar. RELATED: A Simple Guide to Fix Windows 10 Random Freezes Step 3: Now click Configure SLI.same left field. Step 4. Finally, click "Disable SLI" on the right window and you're done! Finally, try launching the game again to check if the problem persists. . If you still cannot launch the game, consider the last method below. Method 4: Force FFXIV to run with DirectX9. If you are using Windows 10, the game runs with DirectX11 by default. . According to some users, they received this message "FFXIV An Unexpected Error Occurred" after updating their Windows OS to version 10. In such cases, users forced the game to run on DirectX9 and that helped solve the problem. a problem. To enable DirectX9, you can change some game settings like Settings > System Configuration > Graphics tab. There is also another option for those who want to run the game with DirectX9 without logging into the game. The steps are as follows: Step 1. First, press the Windows logo key and type "Steam" in the search box. Step 2: Next, open Steam by clicking on the application in the search results. Step 3: After entering the Steam window, go to the "Library" section and find Final Fantasy XIV in the list of games displayed in the library. Step 4: Now right click on the game entry and select "Properties" from the menu list. Step 5. Click on "SET DISCOUNT OPTIONS" in Properties. Step 6: Here you need to type "-dx9" in the blank space and click "OK" to confirm the change. Note. If you see that some entries already exist, enter a space before typing "-dx9". Finally try to start the game. You shouldn't have any more problems since these methods have been tested. However, if you are still having problems, leave a comment in the box below.
