My guys, I have a question. My accelerometer stopped working and it's not a settings issue. My question is the component actually broken or could it be a software issue? I am currently running Cognition 4.5.3 and it was running fine till yesterday I have also tried to reboot the phone with no luck. Let me know if you guys need any more info. Thanks 06-11-2011 01:47 PM Like 0 I'm sure it could have failed, like any hardware component. I'd Odin back to stock, and see if it works there. If not, time for a warranty claim. 06-11-2011 02:26 PM Like 0 Well be damned if I remember where this, but I'm pretty sure there is a sensor testing app or setting...i had to test mine not too long ago and was able to reset it (would not return from landscape, almost like non-reoriented kernel). I will try to find it 06-12-2011 10:28 AM Like 0 I had the exact same problem with my Captivate which, at the time - I was running Serendipity 6.4. My accelerometer just STOPPED working quite randomly and for no good reason. I scoured forums and more forums and used MANY different sensor reading apps and other apps that would 'configure' the accelerometer/g-sensor.... the ONLY fix I discovered for my problem was a factory reset. I just reset my device & reflashed Serendipity and that took care of the problem. Of all the posts on all the forums I read - no one quite seemed to know WHAT exactly the problem was. I didn't think it was the ROM. But, the only way to restore it's functionality was to do a reset and use Titanium Backup to restore all of my apps (but NOT system data, just in case the problem was caused by any system data/settings) I am now running Serendipity VII with the Serendipity VII #3.0 kernel and my acclerometer works just fine now. 06-14-2011 02:24 PM Like 0 I had the exact same problem with my Captivate which, at the time - I was running Serendipity 6.4. My accelerometer just STOPPED working quite randomly and for no good reason. I scoured forums and more forums and used MANY different sensor reading apps and other apps that would 'configure' the accelerometer/g-sensor.... the ONLY fix I discovered for my problem was a factory reset. I just reset my device & reflashed Serendipity and that took care of the problem. Of all the posts on all the forums I read - no one quite seemed to know WHAT exactly the problem was. I didn't think it was the ROM. But, the only way to restore it's functionality was to do a reset and use Titanium Backup to restore all of my apps (but NOT system data, just in case the problem was caused by any system data/settings) I am now running Serendipity VII with the Serendipity VII #3.0 kernel and my acclerometer works just fine now. I was also on Serendipity 6.4, but did not have to reset and reflash. I still haven't found the exact page again yet, but there is a set of steps that include deleting some data file. Sorry I can't find the page I am looking for yet. 06-15-2011 02:14 PM Like 1 Have you tried this yet? Try calibrating (settings, display, horizontal calibration) 06-19-2011 10:56 PM Like 0 This has happened to me twice now where various sensors stop reporting data. Using a sensors test app, it shows that there is no data being received for my Light Sensor and accelerometer. Other sensors like proximity still work though. Currently I'm using Serendipity 6.3. Last time this happened was long ago on a different ROM, possibly stock. Doing a factory last time was the only way I found to fix it. @drs155 do you have any other clues on an alternative solution? Was the solution Serendipity specific? Update: I think I found the post. This fixed my accelerometers, magnetic compass, and my light sensor. It involves deleting a file and then running a program from a root shell. postcount=13 06-27-2011 03:13 AM Like 1 06-28-2011 02:38 PM Like 0 I found the same problem and I did the following and it fixed instantly and now working like champ. In Ice Cream Sandwich Go to Setting > Display > Accelerometer coordinate system > check 'Default coordinate system' Hope it helps. Haris 03-30-2013 02:06 AM Like 0 Anyone know how to fix this? My auto rotate is not working in any app or camera. I downloaded an app to check the sensors including the accelerometer & it shows everything is working. I've restarted & shut off my phone & still nothing. I'm hoping I don't have to send this phone back to Google to get it replaced under warranty... 11-30-2021 03:12 PM Like 0 If you haven't already just make sure you have "auto-rotate screen" set to "ON" under the settings>display. 11-30-2021 03:23 PM Like 0 So I tried everything & nothing worked. Checked Reddit and apparently this problem is happening to multiple people... After reading multiple comments...I came across a ridiculous comment stating to trying doing a couple '8' formations in the air and bring the phone down to a flat surface with a decent amount of force.... oddly enough it worked! this is absolutely bizarre from Google...looks like this phone will be going back as this certainly seems like a hardware issue. bkdodger2 and B. Diddy like this. 11-30-2021 06:30 PM Like 2 So I tried everything & nothing worked. Checked Reddit and apparently this problem is happening to multiple people... After reading multiple comments...I came across a ridiculous comment stating to trying doing a couple '8' formations in the air and bring the phone down to a flat surface with a decent amount of force.... oddly enough it worked! this is absolutely bizarre from Google...looks like this phone will be going back as this certainly seems like a hardware issue. I've remembered having to do the figure eights I think for maps maybe... But I've done it on previous phones. Not for the rotation but for location or something So do you think this is a hardware issue or something that could potentially be fixed with a software update? 11-30-2021 07:18 PM Like 0 So do you think this is a hardware issue or something that could potentially be fixed with a software update? I don't think it's a hardware issue...software if it continues I'd go the reset mode after the next update if still present 11-30-2021 07:25 PM Like 0 11-30-2021 11:46 PM Like 0 Long press auto rotate in the pull down notification panel make sure battery save mode mode not on and maybe enable face detection Yeah tried all that & nothing seems to fix it. Looks like it's an issue which may be fixed with a future software update otherwise I'm afraid this is a hardware issue. Yeah possibly, one last thing you dont mess with developer settings do you? Quick tile ones , where turn sensors off ? 12-01-2021 01:10 AM Like 0 Yeah possibly, one last thing you dont mess with developer settings do you? Quick tile ones , where turn sensors off ? Nope I have never played around with any developer settings... infact, I've never even gone into developer mode. 12-01-2021 01:12 AM Like 0 12-01-2021 01:13 AM Like 0 So I tried everything & nothing worked. Checked Reddit and apparently this problem is happening to multiple people... After reading multiple comments... I have had to do the figure 8 in the air "training" for my old G4 as well. 12-01-2021 07:45 AM Like 0 My original Pixel just had this exact issue after updating apps from the Play Store... so I factory reset it and problem solved, UNTIL I updated a majority (38) of the same apps again after the reset. What fixed the problem was resetting the app preferences for all apps, by going into the apps settings>all apps>3 dots upper right>reset all app preferences. I'm going on memory here though, that was on Android 10 so the directions might not be exact, but they should get you there.... I hope it helps someone I also wanted to add my double tap to wake and lift to wake weren't working either... but resetting all app preferences fixed those as well. 12-01-2021 10:08 PM Like 1 Oh God, not this sensor issue again - I was hoping 6 was immune from that. On my 3XL, I had no sensors for over 2 years - no auto-rotate, no extra camera modes, no compass, no functioning gestures. With the update to 12, suddenly all sensors worked. There was a relatively large group of us with sensor issues and at least 3 ignored threads on the Google support site despite numerous posts by my similarly-suffering compatriots. I really hate to hear this news. but with my 3XL finally working as it originally did, I might hold off on the 6 for a while or altogether. 12-02-2021 10:46 AM Like 0 Figure eight movement was a way to reset or calibrate the compass on a phone. 12-02-2021 11:05 AM Like 0 Oh God, not this sensor issue again - I was hoping 6 was immune from that. On my 3XL, I had no sensors for over 2 years - no auto-rotate, no extra camera modes, no compass, no functioning gestures. With the update to 12, suddenly all sensors worked.
