La Réflexivité

1. Reflexivity of research: A matter of reflection and criticism.
It is a responsibility of researchers. The interaction between the subject and the object.
Researcher must research himself. Because of the relationship between the subject and object.
we need reflexivity. Research design of any kind has to deal with the issue of reflexivity (what is being studied). The possible influence of researchers due to the perception, beliefs or assumptions from researcher's participant.
The are positive biases (psychology studies)
Example of situations: preconception, participants, etc. Because we not passive.
In order to face all these biases it is pertinent to apply reflexivity in the process of research as useful concept in research process.
Any research has to pay attention, for example, to the "symbolic" power relationship between the researcher and the interviewee since the preconception may stem from a obvious sources such as gender, race, age and even indirect sources (economic, cultural, education or religion background).
Qualitative research: measure
Quantitative research: number
It is always necessary to lay a rigorous, transparent, clear methodological framework not to lose with the context.

2. Reflexivity of research: un miroir de réflexion et de critique
Il s'agit d'une responsabilité des chercheurs. L'interaction entre le sujet et l'objet. Parce que chaque recherche a un objet. Et raison de cette relation entre le sujet et l'objet, nous avons besoin de la réflexivité. La conception de la recherche de toute nature doit faire face à la question de la partialité (et le grand obstacle). Les différences possibles des chercheurs en raison de la perception, les croyances ou les hypothèses des chercheurs participants.
Les préjugés positifs (psychologie sociale)
Exemple de situations: Préconception, participants, etc. Parce qu'ils ne sont pas passifs.
Afin de faire face aux préjugés et aux problèmes d'applicabilité à l'efficacité dans le processus de la recherche comme concept utile dans le processus de recherche.
Toute recherche doit faire attention, par exemple, à la relation de pouvoir "symbolique" entre l'observateur et l'observé puisque la préconception peut découler de sources évidentes telles que le genre, l'âge, l'éducation, l'origine ethnique, l'orientation sexuelle, l'orientation économique, culturelle, éducative ou religieuse.
Recherche qualitative: mesure
Recherche quantitative: nombre
Il faut toujours poser un cadre méthodologique rigoureux, transparent, clair pour ne pas laisser avec le contexte.

3. Reflexivity of research: In psychology the humans are both agent and object
In my opinion, it is difficult to denigrate the subject from the object in psychology research in the sense that psychologists who study human beings are themselves human beings, so there is some influence and it is difficult to show objectivity (to abandon his prejudices).
