I tried to upgrade my ancient Samsung Tab 2 7.0 P-3100 this evening. Haven't used it in years. Went for a Cyanogen 13 Marshmallow mod, which works, but makes the old tablet as clogged as an 80 year old on a diet of bread. It's taken up all the memory and storage of the tablet. Utterly useless. I'd like to try Lollipop. I've downloaded CM12.1 version, but can't find a GAPP's version that will load properly. Can anyone help? I'm looking all over for a version that'll work. I've stupidly deleted my old 4.2. installations, and can't roll back to an old version. Cheers, Nick H. I wonder where I can find Android ROM files for Galaxy TAB 2 7.0 GT-P3100. I am looking for Android 5.1.1 who is not a Espresso will file and this is not so easy. I have really tried. I need help.
